

LANDSCOUT™

LandScout binoculars are great, all-purpose binoculars at an affordable price that can bring a new level of enjoyment to almost any activity: sporting events, sightseeing, birding and wildlife observation, hiking, and more! Inside the LandScout are two pairs of Porro prisms, reflective optical prisms that take the form of a right-angle triangle with two sides of equal length. Porro prisms make binoculars more compact without compromising focal length or the transit of the light rays as they pass through it giving it the classic “broad-shoulder” shape of a traditional binocular. Our Porro prisms are constructed of K9 optical glass, which provide high reflectivity so that more light passes through the optical path to your eye.

LandScout also contains other optical surfaces treated with special coatings to boost light transmission even more. The result is a brighter view than uncoated binoculars. Whether you're out on the trail or inside a crowded stadium, you want a binocular that is comfortable to hold and use over long periods, without fear of bumps or drops. LandScout features a lightweight and durable armour-protected chassis. Its tough, rigid frame is coated with rubber to stand up to hard use in the field. The LandScout is also water resistant and can repeatedly stand up to unexpected conditions.

KEY FEATURES

- + K9 Prisms and Coated Optics, image enhancing optical coatings for bright, colour-rich views
- + Close Focus – Detailed, up close observation of subject in close proximity
- + Adjustable Rubber Eyecups – whether you wear glasses or not, maximize your field of view by adjusting the rubber eyecups.
- + Wide field of view allows you to take in the whole scene
- + Ergonomic body – Rubber armour grip surface for extra non-slip comfort and ease of use

ULTIMA®

See it and take it all in, wherever you are. The Ultima 8x42 binocular has a wide 7.5° field of view, nearly four hundred feet wide when measured at a distance of 1,000 yards. It's the perfect choice for watching deer move through a meadow or a home run ball fly into the bleachers without moving your binoculars. But the possibilities don't stop there. Ultima binoculars are great for almost any activity, including sporting events, sightseeing, birding and wildlife observation, hiking, and more!

These classically styled binoculars use their Porro prism optical design to provide optimal image clarity and depth of field. Their widely spaced objective lenses enable enhanced triangulation between binocular and subject, presenting the observer with a rich, three-dimensional image that only traditional Porro prism binoculars can offer.

KEY FEATURES

- + Porro prism binoculars provide an enhanced three-dimensional image of the subject
- + Wide 7.5° field of view allow you to see the entire scene all at once
- + BaK-4 prisms and fully multi-coated optics deliver maximum light transmission through the optical path
- + 13' close focus for detailed observation of subjects in close proximity
- + Ergonomic body with synthetic rubber armour and a non-slip grip
- + Tripod adaptable for extended viewing sessions
- + Eyeglass friendly with generous eye relief and comfortable rubber eyecups

Outland® X

Celestron's mid-size Outland Series was designed to meet the needs of every outdoor enthusiast, from birders and hunters to sports fans to travellers. The optics are multi-coated to obtain high resolution and high contrast views. The prism are made of BaK-4 glass to give you enhanced colour fidelity. The rubber covered Outland X allows for rough and tough handling and the binoculars are waterproof and fogproof and are nitrogen purged for using in all weather environments. Large focus knobs make for easy and precise focusing and twist-up eyecups allow for quick adjustment of eye relief to obtain the full field of view.

KEY FEATURES

- + Multi-Coated Optics
- + Waterproof and Fog-proof
- + Protective Rubber Covering
- + Twist-up Eyecups for Quick Adjustment
- + Moisture Resistant Neoprene Carrying Case

NATUREDX

Celestron's Nature DX 10x42 binoculars are the perfect companion for your next outdoor adventure. A great first step into the world of serious sport optics, the views through Nature DX rival those of more expensive binoculars, at a price to fit your budget. With phase-coated BaK-4 prisms and fully multi-coated optics, Nature DX reveals image detail you won't find with other entry-level binoculars. And when you're off the trail, enjoy superb views of concerts, sporting events, and more.

KEY FEATURES

- + BaK-4 Prisms with Phase Coating: Increases contrast and resolution for sharper more detailed images
- + Fully Multi-Coated Optics: Allows maximum light transmission through the optical path for brighter images
- + 6.5' Close Focus: Detailed, up close observation of subjects in close proximity. Ideal for watching birds, insects, plants, etc.
- + Compact and Lightweight: Fits in a pocket or glove box. Easy to carry on long excursions
- + Wide Field of View: Allows user to quickly acquire the subject being viewed. More viewing area and less need to move the binocular to follow subjects. Easier to follow subjects when they move
- + Twist-up Eyecups: Twist up and down with multiple stops for correct positioning of the users eyes for comfortable viewing with or without eyeglasses
- + Polycarbonate frame: Strong and durable polycarbonate body. Provides structural integrity while keeping the weight to a minimum

NATUREDX

This versatile, all-around binocular is a great choice for the trail, the stadium, the arena, or just about anywhere you want a close-up view of the action without sacrificing brightness or detail. It's an especially great companion for nature observation and bird watching, with ED glass that helps you spot the subtlest field markings and a close focus of just 6.5 feet.

Extra-Low Dispersion (ED) glass virtually eliminates chromatic aberration, also known as colour fringing, a visual defect common in binoculars. Nature DX ED delivers razor sharp images, even at the edges of the field of view. ED glass is also known for producing images with outstanding, true-to-life colour.

Not all ED glass is created equal. Celestron's high quality ED glass delivers visibly brighter, sharper images compared to non-ED binoculars. The difference is especially apparent in low light conditions, such as at dawn or dusk.

KEY FEATURES

- + Extra-Low Dispersion (ED) objective lenses provide high resolution, high contrast images that are virtually free of optical defects like chromatic aberration (colour fringing)
- + Fully multi-coated optics deliver maximum light transmission through the optical path
- + Phase coated BaK-4 prisms produce vivid, true-to-life colours
- + Eyeglass friendly - generous eye relief and sturdy, twist-up eyecups with multiple stops
- + 6.5' close focus
- + Tripod adaptable

TRAILSEEKER™

TrailSeeker binoculars provide high-level outdoor performance, making them perfect for the avid birder. The TrailSeeker is a feature-rich binocular with superb optical quality at an economical price. Phase and dielectric coated BaK-4 prisms dramatically increase light transmission through the prism system for unrivalled image quality and views. Compared to other binoculars in its price range, TrailSeeker offers a better close focus along with a wider field of view. The lightweight magnesium alloy frame is durable and fully waterproof for use in any weather condition.

KEY FEATURES

- + Magnesium Alloy Body: lightweight, durable frame that will last a lifetime and handle use in the field
- + BaK-4 Prisms with Phase and Dielectric Coatings: increased light transmission through the prism system for brighter images. Increased contrast and resolution
- + Wide Field of View: Quickly acquire the subject being viewed. Follow your subject more easily, with less need to move the binoculars
- + Ergonomic Design
- + Fully Multi-Coated Optics: Increased light transmission for brighter views and more resolution
- + 6.5' Close Focus: Detailed, up close observation of subject in close proximity
- + Metal Multi-Stop Twist Up Eyecups: More durable with a longer life than plastic eyecups. Multiple stops for correct positioning of the eyes.
- + Tripod Adaptable: Attach your TrailSeeker to a tripod for extended viewing sessions

TRAILSEEKER™

The TrailSeeker ED binocular provides high-level outdoor performance—a perfect choice for avid birders and outdoor enthusiasts. TrailSeeker ED is packed with optical, mechanical, and ergonomic features that make it comparable to binoculars costing two to five times as much.

ED OBJECTIVE LENSES

Extra-Low Dispersion (ED) glass virtually eliminates chromatic aberration, also known as colour fringing, a visual defect common in binoculars. TrailSeeker ED delivers edge-to-edge sharpness with excellent colour correction and razor-sharp images.

Not all ED glass is created equal. Celestron's high quality ED glass delivers visibly brighter, sharper images compared to non-ED binoculars. The difference is especially apparent in low light conditions, such as at dawn or dusk.

COATINGS AND PRISMS

TrailSeeker ED features fully multi-coated optics and phase- and dielectric-coated BaK-4 prisms. A binocular can be considered "fully multi-coated" when all air-to-glass surfaces are coated with multiple layers of anti-reflectivity coatings so that the maximum amount of light passes through the glass to the eye.

The prism inside TrailSeeker ED is made of high quality BaK-4 glass with both phase and dielectric coatings so that more light is reflected off the prism and diverted through the eye. Taken together, fully multi-coatings and BaK-4 prisms maximize light transmission for the brightest, most detailed images possible.

THE BODY

TrailSeeker ED is composed of lightweight and durable magnesium alloy. Its tough, rigid frame is coated with rubber to stand up to hard use in the field. What's more, the binocular is fully waterproof and filled with dry nitrogen gas to prevent internal fogging of lenses. TrailSeeker ED can stand up to even the toughest outdoor conditions.

Viewing through TrailSeeker ED is comfortable for both eyeglass wearers and non-eyeglass wearers alike, thanks to the durable twist-up eyecups. Twist through multiple click stops to find the position that works best for you.

REGAL™

Regal ED Flat Field Binoculars build on the success of Celestron's customer-favourite Regal ED spotting scope line. With both ED objective lenses and flat field lenses, these binoculars provide sharp, expansive views and of a high degree of accurate colour resolution. As Celestron's new premier line of performance-level field binoculars, the Regal ED Flat Field Binoculars are designed with the most selective of all binocular users in mind: birders. From their vivid, true-to-life colour resolution, expansive fields of view for ease of locating fast moving objects, and 4.9 foot close focus distance to get an even closer look when a subject suddenly pops out of the bushes and right on the trail in front of you, the Regal ED binoculars provide everything needed for the most selective of binocular users – which ensures that they're up to the challenge across a wide-range of other activities.

KEY FEATURES

- + Extra-Low Dispersion (ED) objective lenses provide high resolution, high contrast images that are virtually free of optical defects such as chromatic aberration (colour fringing)
- + Flat field technology ensures level, edge-to-edge image clarity
- + Fully multi-coated optics deliver maximum light transmission throughout the optical path
- + Phase and dielectric coated BaK-4 prisms produce vivid, true-to-life colours.
- + Eyeglass friendly - generous eye relief and sturdy, twist-up eyecups with multiple stops
- + Well-balanced, ergonomic industrial design
- + 4.9' close focus
- + Tripod adaptable

TRAILSEEKER™

The Trailseeker spotting scope series offers an amazing viewing experience in a rugged and durable rubber armoured housing that is fully waterproof and Nitrogen filled. The optical system with proprietary XLT multi-coatings renders high resolution images with outstanding contrast while the dual focus mechanism allows you to get subjects in focus quickly and then fine tune the image. The Trailseeker offers numerous features normally found only in much higher priced spotting scope models, including a sliding sunshade, rotating tripod mount, and interchangeable eyepiece. The Trailseeker is the perfect companion for anyone who enjoys the outdoors.

KEY FEATURES

- + Celestron's proprietary XLT fully multi-coated optics increase light transmission through the optical path to deliver crisp, high contrast images
- + Focus on a subject quickly, then fine tune the image using the dual focus mechanism with course and fine adjustments
- + Get the whole picture using the rotating tripod mount. This mount rotates a full 360° and allows the eyepiece to be set in any viewing position
- + Get close to the action with a zoom up to 67x magnification (100mm) or see the widest field of view at 16x (65mm)
- + Perfect for those who want performance in an easy-to-carry package

HUMMINGBIRD™

The first truly “micro” spotting scope, Celestron's new Hummingbird Micro ED and non ED spotter models will easily fit into your pocket, shoulder bag, or carry-on luggage. This spotting scope is perfect for traveling birders and outdoor enthusiasts as a lightweight alternative to a full-size spotter. Fully multi-coated and nitrogen purged, ED glass for bright, clear views, an adjustable zoom lens, tripod ready, and with the included carrying case and strap, you can keep moving with Hummingbird.

KEY FEATURES

- + Easily carried in vest or coat pocket, in belt pack, or shoulder bag
- + 9-27x magnification range spans binoculars and spotting scopes
- + “Birder-friendly” close focus distance: 10 ft. / 3m close focus satisfies birding field optic requirements
- + Waterproof / Nitrogen filled - Protected against wet weather, humid conditions, and other environmental challenges

ED MODEL ONLY

- + ED lens optical system provides sharp, clear images with vivid, well-managed colour

Regal™ M2

Extra-Low Dispersion (ED) glass meets our proprietary XLT fully multi-coated optics for bright images with true colour, virtually free of chromatic aberration. Set the zoom eyepiece in the perfect viewing position using the 360° rotating tripod mount with detents. Then, rapidly bring subjects into focus with the dual-focus mechanism. A stay-on carrying case provides protection, even when your Regal M2 is mounted on a tripod.

KEY FEATURES

- + ED Objective Lens: Minimizes chromatic aberration, accurate colour reproduction, increased resolution and contrast
- + XLT Coatings (Fully Multi-Coated Optics): Proprietary XLT lens coatings maximize light transmission through the optical path for brighter images and increased resolution and contrast
- + Magnesium Alloy Body: This material is strong and durable, but lighter weight than traditional aluminium alloy housings
- + Dual focus: Course focus for rough adjustment and fine focus for detailed adjustment. New quicker focusing mechanism
- + Rotating tripod mount with detents: Place the orientation of the eyepiece in the best viewing position for application
